

Custom Moulded Cable Assemblies

Overmoulded cable assemblies are extremely durable, weigh less, provide enhanced levels of reliability and often prove to be more economical than similar conventionally fabricated cable assemblies. They also provide a professional product appeal and give the end customer the opportunity to have a product with a dedicated and customised finish, colour, part number and/or logo.

At Memcon we have a wide range of standard connector moulds available which when utilised remove the need for additional tooling fees. Should the application require custom overmoulds these can be as low as US\$250.00 depending upon the design and as such moulded cables can be exceptional value.

We currently manufacture Moulded Cable Assemblies for a whole range of applications including Industrial Control, Instrumentation, Marine Electronics, Audio, Broadcast, Security, Telecommunications and Medical Electronics.

Our advanced assembly processes allow for gromits and strain relief fittings to be included, embedding PCB's and EMI ferrite suppression cores as required.

Our dedicated team will work with you to take your design to production in a matter of weeks with MOQ's possible as low as 250 pieces.
