

Tail Extensions & Interface Cables

Tail Extensions and Interface Cables manufactured to application specific requirements. Designed to interface/mate with Crimpflex, Clincher, Duflex, Molex or other industry standard connectors. The connectors can be fitted from most connector manufacturers, such as Molex, Amphenol, JST, Samtec etc, to the opposite end.

For cost sensitive projects, we can take advantage of low cost manufacturing at our Asian facility, with engineering support, quality control and logistics being managed from the UK. In many cases we can also offer lower cost alternative connectors.

Please contact us to discuss your specific application requirements
